Sam Cotten
Commissioner

By delegation to:

Cory Stantorf
Anchorage Asst. Area Wildlife Biologist

JUSTIFICATION:

In 2011, the Eklutna Lake Management Area moose population was estimated at 80 individuals, including 18 bulls, 50 cows, and 12 calves. In 2013, a survey was flown of neighboring Thunderbird Creek and numbers were found to be consistent with previous years. Weather conditions the last several winters have precluded flying surveys, but harvest and roadkill numbers have remained relatively steady, indicating that the population is unlikely to have decreased substantially. To maintain appropriate bull:cow ratios and the overall population objective, the department has determined the harvest from the Eklutna Lake Management Area should not exceed four bulls. As of September 28th, three bulls have been taken in this hunt and there are still hunters in the field; therefore, no further harvest is warranted from this population.
