JUSTIFICATION:

Biologists observed 48 goats (42 adults, 6 kids) during an aerial survey conducted on September 28, 2016. Subsequent surveys have resulted in lower numbers of observed goats. On September 17, 2019, under conditions similar to the fall 2016 survey, 40% fewer goats (25 adults, 4 kids) were observed. During a survey conducted on September 5, 2020, a total 34 goats (26 adults, 8 kids) were counted. On September 8, 2021, survey conditions were better than in 2019 and 2020 surveys when 34 adults and 7 kids were observed. Population estimates indicate that numbers remain low. Due to the vulnerability of goats in this area, an emergency order is being issued.
