IMPORTANT: Provide all supporting doct and life stages observed; sampling methods, upper extent of each species, as well as oth barriers; etc. Comments: Correct hydrography of existing AWC and better approximate the most curre PDATE/ADJUST hydrography	sampling duration and are her information such as: s stream #331-00-10490 ant LIDAR derived hydr	ea sampled; copies of field respecific stream reaches obs 0-2149, moving upper exography data (NHD, AK	notes; etc. Attach a served as spawning xtent away from a Hydro).	copy of a map sho or rearing habitat;	wing location of m locations, types, a	outh and observe and heights of an
and life stages observed; sampling methods, upper extent of each species, as well as oth barriers; etc. Comments: Correct hydrography of existing AWC and better approximate the most curre	sampling duration and are ther information such as: s Stream #331-00-10490 ant LIDAR derived hydr of existing AWC m. Contemporary hydr	pea sampled; copies of field in specific stream reaches observed. D-2149, moving upper expography data (NHD, AK Stream #331-00-1 Trography data and image	Attach a served as spawning attent away from a Hydro). 0490-2149. ary indicate stream	copy of a map sho or rearing habitat; adjacent AWC St	eream #331-00-	outh and observe and heights of an 10490-2155,
and life stages observed; sampling methods, upper extent of each species, as well as oth barriers; etc. Comments: Correct hydrography of existing AWC sand better approximate the most curre PDATE/ADJUST hydrography ubstantiated & legacy data AWC Streation. New upper extent reflects visible of	sampling duration and are ther information such as: s Stream #331-00-10490 ant LIDAR derived hydr of existing AWC m. Contemporary hydr	pea sampled; copies of field in specific stream reaches observed. D-2149, moving upper expography data (NHD, AK Stream #331-00-1 Trography data and image	Attach a served as spawning attent away from a Hydro). 0490-2149. ary indicate stream	copy of a map sho or rearing habitat; adjacent AWC St	eream #331-00-	outh and observe and heights of an 10490-2155,
and life stages observed; sampling methods, upper extent of each species, as well as oth barriers; etc. Comments: Correct hydrography of existing AWC sand better approximate the most curre PDATE/ADJUST hydrography Substantiated & legacy data AWC Streation. New upper extent reflects visible of les (CHs, DVp).	sampling duration and are ther information such as: s Stream #331-00-1049(Int LIDAR derived hydrof existing AWC Int. Contemporary hydroues of upper extent of the contemporary of the contemporary hydroues of upper extent of the contemporary hydroues	pea sampled; copies of field in specific stream reaches observed. D-2149, moving upper expography data (NHD, AK Stream #331-00-1 Trography data and image	Attach a served as spawning attent away from a Hydro). 0490-2149. ary indicate stream	copy of a map sho or rearing habitat; adjacent AWC St	eream #331-00-	outh and observe and heights of an 10490-2155, roximating actual eys that verify l.
and life stages observed; sampling methods, upper extent of each species, as well as oth barriers; etc. Comments: Correct hydrography of existing AWC and better approximate the most curre PDATE/ADJUST hydrography Stantiated & legacy data AWC Streation. New upper extent reflects visible of ites (CHs, DVp). Name of Observer (please print):	sampling duration and are ther information such as: s Stream #331-00-1049(Int LIDAR derived hydrof existing AWC Int. Contemporary hydroues of upper extent of the contemporary of the contemporary hydroues of upper extent of the contemporary hydroues	ea sampled; copies of field in specific stream reaches observed. D-2149, moving upper expography data (NHD, AK Stream #331-00-1 Grography data and image flowing water and usea	Attach a served as spawning attent away from a Hydro). 0490-2149. ary indicate stream	adjacent AWC Starm line was well am would benefit	eream #331-00-	outh and observe and heights of an 10490-2155, roximating actual eys that verify l.
and life stages observed; sampling methods, upper extent of each species, as well as oth barriers; etc. Comments: Correct hydrography of existing AWC 3 and better approximate the most curre PDATE/ADJUST hydrography Substantiated & legacy data AWC Streation. New upper extent reflects visible of ites (CHs, DVp). Name of Observer (please print): Signature:	sampling duration and are ther information such as: s Stream #331-00-10490 Int LIDAR derived hydrof existing AWC Int. Contemporary hydroues of upper extent of Joe Giefer 10.231.39.10 (ea sampled; copies of field in specific stream reaches observed. D-2149, moving upper expography data (NHD, AK Stream #331-00-1 Grography data and image flowing water and usea	notes; etc. Attach a served as spawning extent away from a Hydro). 0490-2149. dary indicate stread ble habitat. Stread	adjacent AWC Starm line was well am would benefit	eream #331-00-	outh and observe and heights of ar 10490-2155, roximating actu- eys that verify I
and life stages observed; sampling methods, upper extent of each species, as well as oth barriers; etc. Comments: Correct hydrography of existing AWC sand better approximate the most curre PDATE/ADJUST hydrography **ubstantiated & legacy data AWC Streation. New upper extent reflects visible stress (CHs, DVp). Name of Observer (please print): Signature: Agency:	sampling duration and are ther information such as: s Stream #331-00-10490 Int LIDAR derived hydrof existing AWC Int. Contemporary hydroues of upper extent of Joe Giefer 10.231.39.10 (pea sampled; copies of field in specific stream reaches observed. D-2149, moving upper expography data (NHD, AK Stream #331-00-1 Prography data and image of flowing water and use	notes; etc. Attach a served as spawning extent away from a Hydro). 0490-2149. dary indicate stread ble habitat. Stread	adjacent AWC Starm line was well am would benefit	eream #331-00-	outh and observe and heights of an 10490-2155, roximating actual eys that verify l.
