Habitat Section
Southeast Region

114-27-10300 Tributary 9

ADDITION

Water body name:

Survey date: 6/14/2022

Quad: Juneau A-4

Species & Lifestage:

Upper Reach Latitude: 58.032635 **Longitude:** -135.266080

Survey crew: FC, RR

Lower Reach Latitude: 58.033038 **Longitude:** -135.269859

Findings: We surveyed this uncataloged stream using a backpack electrofisher and GPS. We captured juvenile coho salmon, Dolly Varden, and cutthroat trout. The tributary stream is ponded upstream of a couple large beaver dams; downstream of the dams it flows through a 200 ft reach of gravel-dominated channel prior to connecting to the main channel (Table 1; Figures 1–3).

Recommendations: Add this uncataloged stream to the anadromous waters catalog for rearing coho salmon (Figure 4).

Nomination: Pending

Table 1.—114-27-10300 tributary 9 survey data.

Waypoint	Latitude	Longitude	Notes	Stream Width ft	Stream Substrate	Habitat Features	Gradient %	Sample Effort	Sample Results
734	58.032265	-135.269529	Large beaver dam; ponded water.					Not Fished	
739	58.033126	-135.270064	Confluence of main with river-right tributary (largely disconnected at current low flow); confluence of river-left tributary ~50' upstream of waypoint where substrate looks better for spawning. 1-yr CO capture.	6-8	Large Gravel Sand		2-4	EF	2 CO
740	58.032733	-135.269640	Advancing upstream on river-left tributary. Continued 1-yr CO capture.	6-8	Large Gravel Small Gravel		2-4	EF	2 CO
741	58.032495	-135.269539	Large beaver dam; small braid around dam also disconnected. Likely current practical barrier (not true FRPA barrier) to anadromy. 1-yr CO capture just downstream of dam. Should return with minnow traps to survey ponded water upstream of beaver dam(s).					EF	2 CO 1 DV 1 CT
742	58.030988	-135.269035	Large beaver dam; ponded water. Should return with minnow traps to survey tributary upstream and downstream of waypoint.					Not Fished
