Symbols and Abbreviations

The following symbols and abbreviations, and others approved for the Système International d'Unités (SI), are used in Division of Sport Fish Fishery Manuscripts, Fishery Data Series Reports, Fishery Management Reports, and Special Publications without definition. All others must be defined in the text at first mention, as well as in the titles or footnotes of tables and in figures or figure captions.

Weights and measures (metric)		General		Mathematics, statistics, fisheries	
centimeter	cm	All commonly accepted abbreviations.	e.g., Mr., Mrs., a.m., p.m., etc.	alternate hypothesis	H_A
deciliter	dL	All commonly accepted professional titles.	e.g., Dr., Ph.D., R.N., etc.	base of natural logarithm	e
gram	g	and	&	catch per unit effort	CPUE
hectare	ha	at	@	coefficient of variation	CV
kilogram	kg	Compass directions:		common test statistics	F, t, χ^2 , etc.
kilometer	km	east	E	confidence interval	C.I.
liter	L	north	N	correlation coefficient	R (multiple)
meter	m	south	S	correlation coefficient	r (simple)
metric ton	mt	west	W	covariance	cov
milliliter	ml	Copyright	©	degree (angular or temperature)	°
millimeter	mm	Corporate suffixes:		degrees of freedom	df
Weights and measures (English)		Company	Co.	divided by	÷ or / (in equations)
cubic feet per second	ft ³ /s	Corporation	Corp.	equals	=
foot	ft	Incorporated	Inc.	expected value	E
gallon	gal	Limited	Ltd.	fork length	FL
inch	in	et alii (and other people)	et al.	greater than	>
mile	mi	et cetera (and so forth)	etc.	greater than or equal to	≥
ounce	oz	exempli gratia (for example)	e.g.,	harvest per unit effort	HPUE
pound	lb	id est (that is)	i.e.,	less than	<
quart	qt	latitude or longitude	lat. or long.	less than or equal to	≤
yard	yd	monetary symbols (U.S.)	\$, ¢	logarithm (natural)	ln
Spell out acre and ton.		months (tables and figures): first three letters	Jan,...,Dec	logarithm (base 10)	log
Time and temperature		number (before a number)	# (e.g., #10)	logarithm (specify base)	log ₂ , etc.
day	d	pounds (after a number)	# (e.g., 10#)	mideye-to-fork	MEF
degrees Celsius	°C	registered trademark	®	minute (angular)	'
degrees Fahrenheit	°F	trademark	™	multiplied by	x
hour (spell out for 24-hour clock)	h	United States (adjective)	U.S.	not significant	NS
minute	min	United States of America (noun)	USA	null hypothesis	H_0
second	s	U.S. state and District of Columbia abbreviations	use two-letter abbreviations (e.g., AK, DC)	percent	%
Spell out year, month, and week.				probability	P
Physics and chemistry				probability of a type I error (rejection of the null hypothesis when true)	α
all atomic symbols				probability of a type II error (acceptance of the null hypothesis when false)	β
alternating current	AC			second (angular)	"
ampere	A			standard deviation	SD
calorie	cal			standard error	SE
direct current	DC			standard length	SL
hertz	Hz			total length	TL
horsepower	hp			variance	Var
hydrogen ion activity	pH

October 1995

This investigation was partially financed by the Federal Aid in Sport Fish Restoration Act (16 U.S.C. 777-777K) under Project F-10-10, Job No. RT-1.

The Fishery Data Series was established in 1987 for the publication of technically-oriented results for a single project or group of closely related projects. Fishery Data Series reports are intended for fishery and other technical professionals. Distribution is to state and local publication distribution centers, libraries and individuals and, on request, to other libraries, agencies, and individuals. This publication has undergone editorial and peer review.

ABSTRACT

Since 1977, the Alaska Department of Fish and Game has conducted an annual mail survey to estimate sport fishing participation and harvests (fish kept) statewide by Alaska fisheries, areas, regions, and species. Since 1990, catches (fish harvested plus fish released) have also been estimated. Detailed findings are presented for 1994. In 1994, 460,204 anglers took 1,912,648 household trips and fished 2,719,911 days to catch 6,064,974 fish and harvest 3,349,821 fish.

Key words: Alaska, recreation, sport, fish, fisheries, fishing, catch, harvest, angler, angler-days, survey, salmon, trout, char, Arctic grayling, northern pike, whitefish, burbot, smelt, Pacific halibut, rockfish, lingcod, razor clams.

INTRODUCTION

Meeting public demand for recreational fishing opportunities in Alaska while at the same time maintaining and protecting the fisheries resources has become increasingly complex. In the early years of statehood—before rapid population expansion and industrial development—good, uncrowded sport fishing was accessible; large sport fisheries were few and easily monitored; and sport fishing was considered to be a minor factor in management of commercially exploited species.

Today, along with increasing tourism and continued forest, mineral, petroleum, and associated governmental development has come an avid, recreationally-oriented population. Accessible sport fisheries have become crowded, new fisheries have developed, and pressure from a large mobile angling population is spilling ever farther afield. International treaties, native land allotments, (d)(2) national interest land legislation, federal takeover of subsistence management on federal lands within the state, state and federal land conveyances, endangered species considerations, habitat degradation, and problems of access have complicated maintenance and expansion of sport fishing opportunities. The State and private corporations have made substantial commitments to aquaculture and hatchery propagation. Also, recreational fishing is now a significant factor in total fisheries

management, and vociferous sport-commercial-subsistence user conflicts have developed.

Against this backdrop, a statewide database providing information on where sport fishing occurs, the extent of participation, the preferences of participants, and the species and numbers of major game fishes being caught and harvested is essential for regulation and management of Alaska's sport fisheries and for total regulation, management, and allocation of multiple-use fisheries. In addition, this information is needed for establishing priorities; for formulating policies; for budgeting; for planning and evaluating rehabilitation, enhancement, stocking, habitat protection, and access acquisition projects; for stock assessment; for forecasting; for gauging the economic and social significance of sport fishing; and for satisfying requests for information from individuals, special interest groups, government agencies, and the recreational industry.

Because of Alaska's vastness, meeting all these information requirements statewide by onsite creel surveys would be prohibitively expensive, thus an economical supplementary program has been developed. Described herein are results from the eighteenth year of that program, whose primary objective is to provide statewide estimates of participation, catch, and harvest for major Alaskan sport-caught species by area and fishery.

Species covered are listed in Appendix A3. Alaska sport fishing regulatory and management areas are delineated in Appendix A1 and Appendix A2.

METHODS

Two types of questionnaires were used to estimate participation, catch, and harvest associated with sport fishing in Alaska in 1994. One type, the "standard" type, was a multipage questionnaire similar to those used annually since 1977 (Appendix B1). The other type, the "supplementary" type, was a single fold-out page accompanied by a list of sites (Appendix B4). The standard type was mailed to a stratified random sample of 22,000 households containing at least one individual who purchased 1994 sport fishing licenses or at least one individual who possessed a valid permanent identification card (PID) for Alaska sport fishing. The supplementary type was mailed to a stratified random sample of 25,000 such households. Stratification for both types was by household residence: Alaska, other United States, Canada, and other foreign. Reminder letters and questionnaires were mailed to first-time and second-time nonrespondents to both types.

For both types each household was asked for information for 1994 on number of licensees, on participation (number of anglers, trips, and days fished), and number of fish caught and number of fish kept (harvested) by species and site. Information from both types was pooled and catch or harvest for each species or participation for each site was estimated by:

$$\hat{Y}_{hk} = \hat{N}_h \hat{R}_h \frac{\sum_{i=1}^3 \sum_{hi} n_{hi} y_{hijk}}{\sum_{i=1}^3 n_{hi}} \quad (1)$$

where:

y_{hijk} = harvest, catch, or participation at the k^{th} site by the j^{th} household responding to the i^{th} mailing for the h^{th} stratum;

n_{hi} = number of households responding to the i^{th} mailing for the h^{th} stratum;

\hat{N}_h = estimated number of households with at least one fishing license holder in 1994 for the h^{th} stratum

$$= \hat{N}_h = (M_h + P_h) \hat{V}_h; \quad (2)$$

M_h = number of license holders residing in stratum h in 1994;

P_h = equals the total number of individuals with either (1) a PID issued during 1988 through 1993 and on the 1993 Alaska Permanent Fund address list¹, or (2) a PID issued in 1994 for the Alaskan resident stratum (equal to zero for all other strata);

\hat{V}_h = is the estimated ratio of the number of households to license-holders and PID holders for each stratum, calculated from the respondents to the survey as:

$$= \frac{\sum_{i=1}^3 n_{hi}^\dagger}{\sum_{i=1}^3 \sum_{j=1}^{n_{hi}^\dagger} (m_{hij} + p_{hij})} \quad (3)$$

n_{hi}^\dagger = the number of respondents (Appendices A4 and A5) to the i^{th} mailing for the h^{th} stratum who answered the questions regarding the number of sport fishing license and PID holders;

m_{hij} = the reported number of sport fishing license holders in the household for the j^{th} household for the i^{th} mailing for the h^{th} stratum, which is equal to the response for question 2A from the general information page of the questionnaire (Appendices B1 and B4);

p_{hij} = the reported number of individual PID holders for the j^{th} household for the i^{th} mailing for the h^{th} stratum (equal to the response for question 1B from the general

¹ PID holders not on the 1993 Alaska Permanent Fund address list are assumed to be deceased or no longer residing in Alaska.

information page of the questionnaire); and

\hat{R}_h = nonresponse ratio for residential stratum h.

The \hat{R}_h were obtained by simulation based on the following exponential regression models developed for responding households:

$$\ln(n_{hi}) = \alpha_{nh} + \beta_{nh}i + \varepsilon_{nhi}, \quad (4)$$

for $i = 1, 2, 3$;

$$\ln(r_{hi} + 10^{-7}) = \alpha_{rh} + \beta_{rh}i + \varepsilon_{rhi}, \quad (5)$$

for $i = 1, 2, 3$;

where:

r_{hi} = mean participation or catch, for a species, over all sites by respondents to the i^{th} mailing for stratum h;

and ε_{nhi} and ε_{rhi} are normal variates with mean 0 and variance σ^2 .

Parameters α_{nh} , α_{rh} , β_{nh} , and β_{rh} were estimated using the method of least squares (Draper and Smith 1981). The set $\{n_4, n_5, \dots, n_I\}$ was estimated from regression (4), and the set $\{r_4, r_5, \dots, r_I\}$ was estimated from regression (5), where I was the simulated mailing for which:

$$\sum_{i=1}^3 n_{hi} + \sum_{i=4}^I \hat{n}_{hi} = n_h \quad \text{or} \quad \hat{n}_{h(i+1)} < 10^{-7} \quad (6)$$

and where:

\hat{n}_{hi} = estimated number of households responding to the i^{th} simulated mailing, for $i = 4, 5, \dots, I$, for stratum h

$$= \hat{n}_{hi} = e^{(\alpha_{nh} + \beta_{nh}i)} = e^{(\alpha_{nh})} e^{(\beta_{nh}i)}; \quad (7)$$

n_h = the number of households sampled in stratum h.

The term \hat{R}_h was calculated as follows:

$$\hat{R}_h = \frac{\theta_h Y_{rsh} + (1 - \theta_h) \hat{Y}_{nrh}}{Y_{rsh}}; \quad (8)$$

where:

θ_h = proportion of sampled households that responded for stratum h

Y_{rsh} = the reported levels of participation or catch of a particular species over all locations throughout the state for all responding households within each stratum h

$$= \frac{\sum_{i=1}^3 \sum_{j=1}^{n_{hi}} Y_{hij}}{\sum_{i=1}^3 n_{hi}}; \quad (9)$$

\hat{Y}_{nrh} = the simulated estimate for each parameter within each stratum for all simulated mailings for all locations throughout the state

$$= \frac{\sum_{i=4}^I \hat{n}_{hi} \hat{r}_{hi}}{n_h - \sum_{i=1}^3 n_{hi}}; \quad \text{and} \quad (10)$$

\hat{n}_h = the number of deliverable households sampled for each stratum h

\hat{r}_{hi} = simulated mean participation or catch, for a species, over all sites for nonresponding households, $i = 4, 5, \dots, I$ for stratum h

$$= e^{(\alpha_{rh} + \beta_{rh}i)} - 10^{-7} \quad (11)$$

Confidence intervals were calculated using the percentile method of bootstrap resampling (Efron and Tibshirani 1993) with 1,000 replications.

RESULTS

In 1994, 460,204 anglers (Appendix A7) took 1,912,648 household trips (Appendix A11) and fished 2,719,911 days (Appendix A13) to catch 6,064,974 fish (Appendix A14) and harvest 3,349,821 fish (Appendix A14).

PARTICIPATION

Of the 460,204 anglers who fished in 1994, 241,438 (53%) were Alaska residents and

218,766 (47%) were nonresidents (Appendix A9). Of the 2,719,911 angler-days fished in 1994, 1,966,985 (72%) were expended in the Southcentral region of Alaska, 542,939 (20%) were expended in the Southeast region, and 209,987 (8%) were expended in the Arctic-Yukon-Kuskokwim region (Appendix A13). The Cook Inlet area had 1,443,474 days, 53% of the state's total sport fishing. The Kenai Peninsula had 1,003,847 angler-days or 37% of the state total. The Kenai River had 340,904 angler-days, 13% of the state total. An estimated 1,046,643 days, 38% of all sport fishing, were in saltwater; 1,673,268 days, 62% of all sport fishing, were in freshwater.

Residents of Alaska fished 1,754,561 days, 65% of all fishing; nonresidents fished 965,350 days, 35% of all fishing (Appendix A4). In Southeast Alaska, residents fished 259,109 days, 48% of all Southeast fishing; and nonresidents fished 283,830 days, 52% of Southeast fishing. In Southcentral Alaska, residents fished 1,318,825 days, 67% of all Southcentral fishing; and nonresidents fished 648,160 days, 33.0% of Southcentral fishing. In the Arctic-Yukon-Kuskokwim Region of Alaska, residents fished 176,627 days, 84% of that region's fishing; and nonresidents fished 33,360 days, 16% of the regional total.

HARVEST

The 3,349,821 fish harvested in 1994 (Appendix A14) included 1,317,675 razor clams *Siliqua patula* and 106,127 smelt and capelin *Osmeridae*. Of the remaining 1,926,019 harvested fish, 1,096,619 (57%) were anadromous (sea-run) salmon *Oncorhynchus*, 329,046 (17%) were Pacific halibut *Hippoglossus stenolepis*, 112,261 (6%) were rainbow trout *Oncorhynchus mykiss*, 98,971 (5%) were rockfish *Sebastes*, 73,532 (4%) were Dolly Varden *Salvelinus malma* and Arctic char *Salvelinus alpinus*, 63,457 (3%) were Arctic grayling *Thymallus arcticus*, and 42,491 (2%) were landlocked salmon

(chinook salmon *Oncorhynchus tshawytscha*, coho salmon *Oncorhynchus kisutch*, and kokanee *Oncorhynchus nerka*). Also harvested were 27,878 lingcod *Ophiodon elongatus*, 25,785 northern pike *Esox lucius*, 11,374 lake trout *Salvelinus namaycush*, 10,868 burbot *Lota lota*, 7,088 cutthroat trout *Oncorhynchus clarki*, 4,548 whitefish *Coregonus* and *Prosopium*, 2,346 steelhead *Oncorhynchus mykiss*, 1,511 sheefish *Stenodus leucichthys*, and 481 brook trout *Salvelinus fontinalis*.

The 1994 total anadromous salmon harvest of 1,096,619 included 176,870 chinook salmon, 502,127 coho salmon, 251,605 sockeye salmon, 144,140 pink salmon *Oncorhynchus gorbuscha*, and 21,877 chum salmon *Oncorhynchus keta* (Appendix A14). The marine salmon harvest total of 468,302 included 67,325 chinook salmon, 260,314 coho salmon, 16,176 sockeye salmon, 111,366 pink salmon, and 13,121 chum salmon (Appendix A15). The freshwater total of 628,317 anadromous salmon included 109,545 chinook salmon, 241,813 coho salmon, 235,429 sockeye salmon, 32,774 pink salmon, and 8,756 chum salmon (Appendix A16). Regionally, 311,072 anadromous salmon were harvested in Southeast Alaska (Appendix A17), 759,200 in Southcentral (Appendix A18), and 26,347 in the Arctic-Yukon-Kuskokwim area (Appendix A19).

Except for razor clams, shell fisheries are not included in the 3,349,821 total fish harvest reported above. For the Kenai Peninsula, however, these fisheries were surveyed for dungeness crab *Cancer magister*, tanner crab *Chionoecetes bairdi*, shrimp *Pandalidae*, and hardshell clams. Harvest and participation for these species are reported in Appendix A89. Also not included in the total fish harvests are personal use fisheries. However, harvests and catches for the China Poot, Fox Creek, Kasilof River, and Kenai River personal use dipnet

fisheries are in Appendices A85 and A86; and harvests and catches for the Fish Creek personal use dipnet fisheries are in Appendices A73 and A74.

CATCH

The catch of 6,064,974 fish in 1994 (Appendix A14) included 1,317,675 razor clams and 116,969 smelt. Of the remaining 4,630,330 fish caught, 695,829 (15%) were coho salmon, 596,174 (13%) were rainbow trout, 521,725 (11%) were Pacific halibut, 514,895 (11%) were Arctic grayling, 433,838 (9%) were sockeye salmon, 388,201 (8%) were Dolly Varden and Arctic char, 383,072 (8%) were pink salmon, 310,177 (7%) were chinook salmon, and 205,662 (4%) were rockfish. Also caught were 131,562 northern pike, 98,148 chum salmon, 87,696 landlocked salmon (chinook, coho, and kokanee), 54,408 lingcod, 45,107 lake trout, 43,938 cutthroat trout, 25,318 steelhead, 14,476 burbot, 13,966 whitefish, 2,981 sheefish, and 1,325 brook trout.

Harvest, catch, and participation for 1994 are tabulated by region, area, fishery, and species in Appendix A. Detailed tabulations for harvest and participation for 1977 through 1993 may be found in Mills (1979, 1980, 1981a, 1981b, 1982, 1983, 1984, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, and 1994).

DISCUSSION

The estimated number of anglers who sport fished in Alaska in 1994 increased 8% from 1993 (Appendix A9). The number of resident anglers increased 2% and the number of nonresident anglers increased by 16%. Since 1984, the number of anglers fishing in Alaska has increased 37%, 3% per year. Resident angler participation since 1984 has increased 2%, under 1% per year; nonresident participation has increased 123%, 8% per year.

Anglers-days fished in Alaska in 1994 was a record high, up 6% from 1993 (Appendix A13). Regionally, days fished increased 15% in Southeast, increased 5% in Southcentral, and decreased 5% in the Arctic-Yukon-Kuskokwim. Since 1984, days fished statewide has increased 46%, 4% per year. Regional increases since 1984 were 66% for Southeast, 5% per year; 47% for Southcentral, 4% per year; and 6% for the Arctic-Yukon-Kuskokwim region, under 1% per year.

Estimated statewide catches decreased 4% from 6,307,062 in 1993 to 6,064,974 in 1994. Regionally, catches were up 6% in Southeast Alaska, and down 6% in the Southcentral Region, and down 5% in the Arctic-Yukon-Kuskokwim Region. Major contributors to statewide decreases were decreases in chinook salmon, Pacific halibut, rainbow trout, and Dolly Varden/Arctic char.

The statewide harvest of anadromous salmon was the second highest on record, exceeded only by the 1989 harvest. It was up 4% from 1993 and was 22% above the 1984-1993 mean (Appendices A20 and A21). These increases were due primarily to a record coho salmon harvest that exceeded last year's previous record by 22% and was 66% above the previous 10 - year mean (Appendices A24 and A25). The southeast Alaska coho harvest exceeded the previous 1991 record by 55% and was up 136% from the previous 10 - year mean. The Southcentral coho harvest was also a record high, up 6% from the 1993 record and up 41% from the previous 10 - year mean.

The statewide harvest of Pacific halibut was also a record high, up 5% from the 1993 record and up 56% from the previous 10 - year mean. Both the Southeast and Southcentral Alaska harvests of Pacific halibut were record highs, both up 5% from the 1993 records.

The harvests of steelhead trout, cutthroat trout, lake trout, and Dolly Varden/Arctic Char were all record lows, down by nearly half or more from the peak harvests of the early to mid 1980's.

Over the past eighteen years the statewide sport fish survey has proved effectual in economically meeting management needs for estimates of participation and harvest for Alaska's sport fisheries. The survey has been well received by the angling public. For the larger fisheries harvest results have been consistent with onsite creel surveys (Appendix A110, Mills and Howe 1992), and sport fish biologists report that statewide survey harvest estimates for areas not creel surveyed are generally in accordance with their own knowledge and observations.

Thus, in the interest of economic efficiency, the statewide survey has replaced onsite creel surveys in cases where creel surveys are not required for inseason management or ensuring compliance with regulatory and management policies, quotas, and guidelines. It is planned that in 1995 surveys similar to this year's will be undertaken.

ACKNOWLEDGMENTS

We thank Dora Sigurdsson for assistance with questionnaire development; Carol Hepler for preparation of cover art and maps; Kent Thomas for drawing the sample, generating mail labels, and updating bar code login software; Dora Sigurdsson for assistance with survey implementation and supervision; Ardys Armstrong, Alyssa Dragnich, Tami Eller, Tracy Smith, and Allison Vaillancourt for processing returned questionnaires; Donna Buchholz, Kathy Kush, and Marlyn Cowan for editing sport license records, and coding and key entering of survey data; Cynthia Olnes for updating data entry forms; Kathrin Sundet for assistance with generating detail and summary estimate tables; Dora Sigurdsson, and Kent

Thomas for assistance with formatting of tables; Dora Sigurdsson for assistance with preparing the manuscript for publication, including production of graphics; Dora Sigurdsson, Kathy Kush, and Marlyn Cowan for assembling auxiliary data; Kathrin Sundet and Gail Heineman for generating confidence intervals; Allen Bingham for technical consultation and review; and Gwyn Alexander for review of the manuscript for style and format and for coordinating its publication. We also thank the angling public for participating in the survey and for its funding (through payment of state license fees and through payment of excise taxes collected pursuant to the Federal Aid in Sport Fish Restoration Act).
