2024 ANNUAL MANAGEMENT PLAN GUNNUK CREEK HATCHERY

NORTHERN SOUTHEAST REGIONAL AQUACULTURE ASSOCIATION

This Annual Management Plan (AMP) is prepared to fulfill the requirements of 5 AAC 40.840. This plan must organize and guide the hatchery's operations regarding production goals, broodstock management, and harvest management of hatchery returns. The plan must be developed with consideration of the hatchery's production cycle. The production cycle begins with adult returns, that lead to egg takes and end with fish releases. Action may be taken outside of the management plan if allowed under the hatchery permit or modified by emergency order. In season assessments and project alterations by Northern Southeast Regional Aquaculture Association (NSRAA) or Alaska Department of Fish and Game (ADF&G) may result in changes to this AMP in order to reach or maintain program objectives. NSRAA will notify the ADF&G private nonprofit (PNP) hatchery program coordinator in a timely manner of any departure from the AMP. The ADF&G PNP coordinator will advise as to whether an amendment, exception report, or other action is warranted. No variation or deviation will be implemented until an AMP amendment has been approved or waived by both the department and NSRAA. This policy applies to all hatchery operations covered under the AMP.

1.0 EXECUTIVE SUMMARY

1.1 Background

Gunnuk Creek Hatchery (GCH) is a private nonprofit facility, previously owned and operated by Kake Nonprofit Fisheries Corporation (KNFC) and currently owned by the Northern Southeast Regional Aquaculture Association (NSRAA). The hatchery is located in the city of Kake, on the northwest tip of Kupreanof Island. Gunnuk Creek (109-42-004) supplies the hatchery water via one 10" high-density polyethylene (HDPE) pipeline. Up to 5.0 cubic feet per second of water is available. In 2021, the Inside Passage Electric Cooperative completed the Gunnuk Creek Hydro Electric project. A 54" penstock supplies water to the new turbine building neighboring the Gunnuk Creek Hatchery facility. In addition to NSRAA's 10" penstock, the facility now has an 18" HDPE tap from the 54" tied into the facility's supply system.

1.2 New This Year (production, harvest management, culture techniques, etc.)

In 2023, NSRAA collected approximately 8 million chum eggs from GCH returns. Hidden Falls Hatchery (HFH) collected the remaining 12 million eggs to reach the 20 million broodstock program goal for GCH and transferred those eggs to the facility as eyed eggs.

The GCH return in 2024 will be comprised of 3–6 year old chum. The forecast is 6 times greater than any previous NSRAA return to the facility at 211,000 adults. NSRAA expects to aggressively cost recovery harvest the return in the GCH Special Harvest Area (SHA) and utilize the escapement to Gunnuk Creek for broodstock. Gunnuk Creek continues to experience elevated losses due to hatch failure. A portion of the eggs collected at GCH

may be moved to HFH at the eyed stage with eggs collected at HFH replacing those for the broodstock program. This may be attempted to alleviate hatch issues at GCH, as historical eyed eggs transferred to the facility have performed significantly better. In addition to this possible production change, GCH is investigating water hardness additives to potentially address water quality factors.

The return of close to 1,200 Chinook salmon to GCH in 2023 prompted the first egg take of that species at the facility on behalf of the HFH permit. NSRAA obtained FTP 23J-1005 and collected and transported approximately 170,000 green eggs from GCH returns. Due to a significant shortfall at Medvejie Creek Hatchery (MCH), an additional FTP (23J-1011) on behalf of the MCH permit was acquired to allow eggs from the GCH return to be transferred to MCH via HFH to backfill that facilities core programs.

The 2024 GCH Chinook salmon forecast is more than double the 2023 forecast. NSRAA's forecast for MCH is again poor and anticipates another possible bloodstock shortage. Returns to GCH will likely be used again for either, or both, the MCH and HFH programs.

1.3 New permits or permit amendments needed this year

All fish transport permits (FTPs) are current for 2024. No new programs are anticipated at this time.

1.4 Expected Returns

Species	Release Location	Common Property Harvest	Other ¹	Total Return
Chum salmon	Southeast Cove THA/SHA	156,000	59,000	215,000
Chum salmon	Gunnuk Creek SHA	0	211,000	211,000
Chinook salmon	Gunnuk Creek SHA ²	450	450	900

¹ Includes cost recovery, broodstock, escapement, etc.

Note: THA = Terminal Harvest Area.

1.5 *Production Summary*

Program Name	Release Date	Life Stage	Planned Release Number
Gunnuk Creek chum salmon	May 2024	Fed fry	13,000,000
Southeast Cove chum salmon	May 2024	Fed fry	44,000,000

1.6 Egg takes

NSRAA plans to conduct an egg take at GCH in 2024 on returns of 3-6 year old chum.

² The production summary and egg take for Chinook salmon returns to the GCH SHA are in the HFH AMP.

Species	Ancestral Stock(s)	Egg-take Site	Current Year Goal	Permitted Maximum
Chum salmon	Kadashan R	GCH	$20,000,000^1$	65,000,000

¹ Alternate egg sources will be used if needed to meet maximum permitted capacity.

See Hidden Falls Hatchery (HFH) AMP for details on eggs taken at Hidden Falls and transferred to Southeast Cove or GCH.

Species	Ancestral Stock(s)	Egg-take Site	Current Year Goal	Permitted Maximum
Chum salmon	Kadashan R	HFH	$45,000,000^1$	65,000,000

Alternate egg sources will be used if needed to meet maximum permitted capacity.

1.7 Current permitting

In 2018, NSRAA was issued PNP Hatchery Permit #50 to operate the GCH. The permitted capacity of GCH is 65 million green chum salmon eggs, 20 million green pink salmon eggs, and 500,000 green coho salmon eggs. Gunnuk Creek Hatchery may take additional chum salmon eggs for transport to Port Armstrong Hatchery or HFH, if requested. There are no plans for coho or pink salmon production at this time.

HFH is permitted to release up to 200,000 Chinook salmon smolt from the Gunnuk Creek net pens and 700,000 at Southeast Cove. See the HFH AMP for details about the Chinook program.

FTPs listed below are issued to Hidden Falls Hatchery:

FTP#	Ancestral Stock	Egg take, transport, or release	Transport from To	Maximal #, life stage	Expires
Chum Saln	non				
17J-1019	Kadashan R	Transport, Release	HFH to GCH	20,000,000 fry	12/31/32
12J-1022	Kadashan R	Transport, Release	HFH to SEC	55,000,000 fry	12/31/32
16J-1004	Kadashan R	Egg take, Transport	GCH SHA to HFH	55,000,000 eggs	12/31/25
20J-1026	Kadashan R	Transport	GCH SHA to HFH	55,000 adult	12/31/25
16J-1005	Kadashan R	Transport, Egg take	SEC to HFH	55,000 adult	12/31/25
20J-1034	Kadashan R	Egg take, transport	GCH to HFH	101,000,000 eggs	12/31/30

SEC = Southeast Cove.

FTPs listed below are issued to Gunnuk Creek Hatcher	y:
--	----

FTP#	Ancestral Stock	Egg take, transport, or release	Transport from To	Maximal #, life stage	Expires
Chum Saln	non				
19J-1020	Kadashan R	Egg take, Transport	HFH to GCH	65,000,000 eggs	12/31/29
20J-1005	Kadashan R	All	GCH	65,000,000 eggs 20,000,000 fry	12/31/29
20J-1006	Kadashan R	Transport, Release	GCH to SEC	55,000,000 fry	12/31/29
22J-1012	Kadashan R	Egg take, Transport	MCH to GCH	65,000,000 eggs	12/31/32

 $\overline{SEC} = Southeast Cove.$

2.0 SUMMER RUN CHUM SALMON PRODUCTION

2.1 This Year's Planned Egg Takes

Program Name	Ancestral Stock(s)	Egg-take Site, Stat Area	Primary or Alternate Source?	Current Year Egg Goal	Permitted Maximum
Gunnuk Creek chum salmon	Kadashan R	GCH	P	20,000,0001	65,000,000
Southeast Cove chum salmon	Kadashan R	HFH	P	45,000,000 ¹	55,000,000
Species/Run Totals				65,000,000	65,000,000

¹ Alternate egg sources will be used if needed to meet maximum permitted capacity of 65 million green eggs.

2.2 Broodstock capture method

Broodstock will volitionally enter Gunnuk Creek and make their way upstream to the facility location. There is an adjustable bar picket weir installed just upstream of the terminus of the fish ladder. Fish are held in raceways above the ladder until ready for spawning.

2.3 Spawning

Broodstock will be collected from the adult holding raceways, and eggs and sperm removed in an adjacent covered spawning area. Fertilization occurs in the spawning area; eggs are transported by elevator to the incubation room on the main hatchery level. There they are rinsed and then water-hardened in bulk R-48 type incubators. Broodstock carcasses are likely to be sold and will be iced and loaded on tenders. Attempts will be

made to donate unsold carcasses prior to grinding or disposing of whole broodstock carcasses at ADEC approved disposal locations.

2.4 *Egg-take schedule*

Egg take will occur in late July through mid-August.

2.5 Carcass disposal

Carcass disposal is according to the DEC-approved plan. Broodstock carcass priority will be to sell to a processor, donate to local community, whole carcass discharge, or, if multiple mechanical failures preclude accessing the marine disposal site and the carcasses cannot be temporarily stored until mechanical failures are corrected to allow the third option, landfill disposal as last option. The likelihood of disposing of carcasses in the landfill is very low.

2.6 Planned releases this calendar year of previous brood years' production

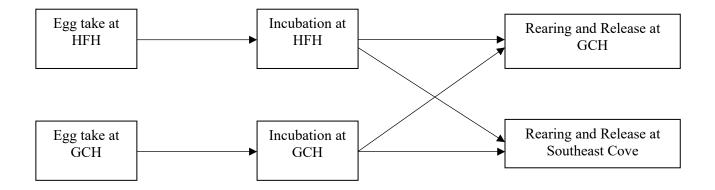

Program Name	Brood Year	Release Date	Number to Release ¹	Life Stage	Type of Mark, % Marked
Gunnuk Creek					Otolith
SHA chum	2023	May 2024	13,000,000	Fed fry	thermal-
salmon					marked, 100%
Southeast Cove					Otolith
THA/SHA	2023	May 2024	44,000,000	Fed fry	thermal-
chum salmon					marked 100%

¹ See chum salmon production table for more detail.

2.7 Previous brood years that will remain in culture during the entire calendar year

None.

2.8 Standard operational diagram

2.9 *Program details*

The purpose of the program is to provide chum salmon to the common property fishery in Frederick Sound and Chatham Strait, as well as broodstock and cost recovery for GCH. The chum salmon program at GCH started in 1977. GCH has two chum salmon release sites, one at the hatchery, and one remote release site at Southeast Cove. All chum salmon production will be split 50/50 with a target size of 2 grams and 4 grams with releases occurring in late May to early June.

3.0 HARVEST MANAGEMENT

3.1 Special/Terminal Harvest Areas

Southeast Cove THA: Described in 5 AAC 33.387, District 9: Southeast Cove Terminal Harvest Area Management Plan. (Statistical Area 109-41)

Southeast Cove SHA: Described in 5 AAC 40.073, District 9: Southeast Cove Special Harvest Area. (Statistical area 109-41)

Gunnuk Creek SHA: Described in 5 AAC 40.071, District 9: Gunnuk Creek Special Harvest Area. (Statistical area 109-40)

3.2 Projected returns to special/terminal harvest areas this year

Species	Program	Projected Common Property Harvest	Other ¹	Total Projected Return, Current Year
Chum salmon	Southeast Cove THA/SHA	156,000	59,000	215,000
Chum salmon	Gunnuk Creek SHA	0	211,000	211,000
Chinook salmon ²	Gunnuk Creek SHA	450	450	900

¹ Includes cost recovery, broodstock, and escapement, etc.

3.3 *Common property fisheries management*

Commercial fisheries: In February 2012, the Alaska Board of Fisheries supported establishing Southeast Cove SHA as a THA.

Weekly openings may occur from the third Sunday of June through the first Saturday in August. After the first Saturday in August, only cost recovery may occur in a very limited area due to run timing of local pink salmon stocks. However, if significant numbers of fish remain, additional common property opportunity may be provided via emergency order, or a cost recovery fishery may be implemented dependent on the presence of wild salmon stocks in the area.

²HFH production.

At its spring 2022 Board of Directors meeting, NSRAA passed a motion to allow gillnetting in the Southeast Cove THA/SHA on Tuesdays and Wednesdays for the 2022 season with direction for rotation as follows: seine Sunday and Thursday; gillnet Tuesday and Wednesday; troll Monday, Friday, and Saturday. The NSRAA board passed a motion at its spring 2024 Board of Directors meeting to mirror the schedule from the 2022-23 season. The NSRAA board also passed a motion directing the cost-recovery harvest split across NSRAA sites. Southeast Cove returns will be harvested to target approximately \$200,000 in revenue.

In 2024 the following harvest management strategy will be implemented following costrecovery harvest completion:

Seine:

• Will open on Sundays and Thursdays, June 16 through August 1, 2024.

Gillnet:

• Will open on Tuesdays and Wednesdays, June 18 through July 31, 2024.

Troll:

• Will open on Mondays, Fridays, and Saturdays, June 17 through August 3, 2024.

For 2024 information and schedule of fishing by gear group, see the Southeast Cove Terminal Harvest Area Advisory Announcement issued April 23, 2024.

Sport fisheries: With the expected return of approximately 900 adult Chinook salmon to GCH and only tentative plans to collect broodstock in this location, the sport fishery will open to the harvest of Chinook salmon within the boundaries of the Gunnuk Creek SHA between June 1-June 14. This area has been included in the marine waters closed to retention of Chinook salmon from April 1–June 14 as part of the regional actions to protect Southeast Alaska wildstock Chinook salmon. This action will allow sport fishing opportunity for these hatchery-produced Chinook salmon in a limited area during the expected timing of their return. The regional Chinook salmon regulations will apply in the Gunnuk Creek SHA between June 1 and June 14 and continue to apply once this area opens to the retention of Chinook salmon after June 14 through the remainder of the year. Returning chum salmon to Southeast Cove and Gunnuk Creek are not expected to attract additional sport fishing effort. The regional bag and possession limits for chum salmon will continue to apply in these areas. The department may use emergency order authority to address issues as they arise in-season.

Additionally, under regional actions to conserve wild Southeast Alaska Chinook salmon stocks, commercial troll THA initial openings are delayed until June 1. Correspondingly, the Gunnuk Creek THA will open to provide continuous troll opportunity between June 1–30, unless closed by emergency order.

3.4 *Cost-recovery harvest management*

Chum salmon: A historically large number of chum salmon are forecasted to return to Gunnuk Creek SHA in 2024. It is expected there will be significant surplus return to broodstock needs and an aggressive cost recovery harvest will occur. No common property commercial openings are anticipated to occur in the Gunnuk Creek SHA.

The Southeast Cove THA/SHA will likely be limited to cost recovery harvest after August 3 to minimize pink salmon interception during pink salmon management for the area. NSRAA intends to collect approximately \$200,000 of revenue from the Southeast Cove THA/SHA. Cost recovery operations will likely be conducted in between openings of the Southeast Cove THA/SHA to common property fishing. If needed, a commercial common property fishery closure may occur during the peak of the run to facilitate cost recovery harvest.

4.0 APPROVAL

Recommendation for Approval: Gunnuk Creek Hatchery Annual Management Plan,	2024
Adam Olson, NSRAA	5/14/2024
Jeff Rice, Area Management Biologist, Division of Sport Fish	5/14/2024
Katie Taylor, Area Management Biologist, Division of Commercial Fisheries	5/14/2024
Judy Lum, Regional Supervisor, Division of Sport Fish	5/31/2024
Anne Reynolds-Manney, Regional Supervisor, Division of Commercial Fisheries	5/21/2024
Lorraine Vercessi, PNP Hatchery Program Coordinator, Div. of Commercial Fisheries	6/3/2024
Approval:	
The 2024 Gunnuk Creek Hatchery Annual Management Plan is hereby approved:	
Tom Taube, Deputy Director, Division of Sport Fish	6/3/2024
Forrest Bowers, Operations Manager, Division of Commercial Fisheries	6/3/2024

Notes:

^{1978–1998} numbers from 2004 AMP; some return data missing thru 1988.

^{1980 -} Eggs destroyed in 1980 due to septicemia brought on by ammonia toxicity.

^{1981 -} Hatchery built.

^{1976–1979 -} Operated under a scientific-educational permit with Kake School district. Few eggs and few records kept.

^{1984–1987, 2001, 2009, 2010 -} Received some eyed eggs from Hidden Falls Hatchery and/or Port Armstrong Hatchery.

^{1999 -} Present production numbers from web page. Web page reports returns by return year and does not break down to brood year.

^{2000 -} Old dam failure.

^{2001–2006 -} Hatchery on temporary pipeline intake.

^{2006–2007 -} New Gunnuk Dam construction.

^{2008 -} Hatchery online in new dam.

^{2010 -} Very hot drought conditions affected return (creek very dry).

2007	25,000	8,803	9,180	238	250	488	2.71%
2008	50,000	35,978	0	2,274	2,561	4,835	10.52%
2009	135,000	98,272	0	4,906	2.563	7,469	7.60%
2010	260,665	91,385	25,000				
2011	507,736	456,962					
•		•			•	Average	4.76%

Average (BY05 to present)

BY94-00 data from 2004 AMP.

1994–2004 all fry releases for USFS projects at Portage Bay Creek and Duncan Creek.

BY05-current have been smolt releases at GCH.

Appendix 2.- NSRAA Production Tables
