I'm deeply disturbed with the dungenous crab fishery. In the past few years the crab have declined substantially, and not due to the sea otters. More like the commercial crabbers and their long crabbing season. What they get 3 crabbing seasons a year and like 2 months at a time. They are stripping the bottom of all the crab here, too many pots for many seasons in a year, we as in the sport crabbers can't even find a legal crab. You need to take a good look at this problem and fix it before it's too late. Oh yes, the only reason the otters are eating all the crab is because they're getting the last 5% of the crab around. I live in Petersburg and it's really bad here, they overfish this area, the Narrows, Duncan Canal, mouth of the Stikine river, I'm asking you to take a really good look at this.

Thank you for your time
