

PROPOSAL 99

5 AAC 33.387. District 9: Southeast Cove Terminal Harvest Area Management Plan.

Establish a gear rotation between purse seine and troll gear in the Southeast Cove Terminal Harvest area, as follows:

(d) The management plan allows for the harvest of hatchery-produced chum salmon by the purse seine, gillnet, and troll fisheries when there are excess fish not being harvested by the hatchery operator. The gear and rotation, if any, shall be **seine fleet- Sunday and Thursday; troll fleet- all other days.** [DETERMINED BY THE COMMISSIONER, BY EMERGENCY ORDER, IN CONSULTATION WITH THE HATCHERY OPERATOR.]

What is the issue you would like the board to address and why? The Enhanced Salmon Allocation Management Plan 5 AAC 33.364, sets allocation ranges for each gear. This action is viewed as working toward achieving those specified ranges.

PROPOSED BY: Southeast Alaska Seiners Association
