

Pacific cod

PROPOSAL 204

5 AAC 28.130 Lawful gear for Eastern Gulf of Alaska Area.

Allow pots to be longlined in the state waters of the Eastern Gulf of Alaska commercial Pacific cod fishery.

In the Eastern Gulf of Alaska Area, pots may not be longlined, except that pots may be longlined in the Pacific Cod fishery and in the Northern Southeast Inside Subdistrict and Southern Southeast Inside Subdistrict Sablefish fishery. In a directed fishery for Sablefish pots used to take Sablefish must have at least two circular escape rigs with a minimum inside diameter of three and three-fourths inches installed on opposing vertical or sloping walls.

What is the issue you would like the board to address and why? In the Eastern Gulf of Alaska Area longlining pots for Pacific cod is currently not allowed. Longlining pots have proved to be a very efficient, low bycatch way of harvesting Sablefish in both the Federal and State fisheries. I would like the opportunity to use the same gear in the Pacific Cod fishery.

Did you develop your proposal in coordination with others, or with your local Fish and Game Advisory Committee? Explain. Through conversations with fishery managers and fellow fisherman.

PROPOSED BY: Jared Bright (EF-F24-097)

PROPOSAL 205

5 AAC 77.674. Personal use bottomfish fishery.

Allow personal use retention of Pacific cod and rockfishes, including thornyhead rockfish, in pot gear, as follows:

5 AAC 77.674 (2) is amended to read:
In the personal use taking of bottomfish,
(2) [EXCEPT SABLEFISH] bottomfish may be taken for personal use only by longline or hand held line, **except sablefish, Pacific cod, rockfish, and thornyhead rockfish may be taken for personal use only by longline, hand held line, or pot gear**; for all bottomfish, unattended gear must be marked as described in 5 AAC 77.010(d);

What is the issue you would like the board to address and why? With the recent increase in pot gear use in the personal use sablefish fisheries, Pacific cod and rockfishes caught as bycatch in pot gear must be released. Pacific cod and most rockfish species have a closed swim bladder and suffer embolism mortality when brought to the surface. Current regulations do not allow retention of Pacific cod or rockfishes in personal use pot gear; therefore, these bycatch species are discarded at sea. Allowing retention of Pacific cod and rockfishes will reduce waste and mirror subsistence and commercial pot gear retention regulations for these species.
